

# Certified diplomas on the blockchain: Microsoft for startups chose BCDiploma

**BCDiploma gained the trust of the giant Microsoft by integrating Microsoft For Startups.** An exclusive program that selects projects with high potential: BCDiploma offers cutting-edge technology combining blockchain and Azure cloud services. **Ease of use, maximum security, simplified university administrative processes:** BCDiploma brings blockchain technology into schools and on CVs!

**Two out of three CVs contain false information, sales of fake diplomas have exceeded \$1 billion over the past decade:** BBC News announced that more than 40 fraudulent websites have been closed.

Launched in September 2018, **the solution developed by BCDiploma guarantees recruiters that a candidate's diplomas are authentic.** To this end, higher education institutions enter information about their graduates (surname, first name, date of birth, major, etc.) on the blockchain. The graduate then gets a link that he or she can share on social networks and include in his or her CV. No more problems with lost diplomas. **The potential employer clicks on the link to review the diploma, with the assurance of its authenticity.**

**BCDiploma is one of 35 startups selected by the Île de France Region to participate in CES 2019 in Las Vegas,** highlighting EMLyon business school's EdJobTech Accelerator, which is actively involved in the international deployment of the solution.
